Internal Picks and Put-Aways  
Warehouse Management Systems

## Manufacturing

Assembly Management  
Standard Cost Worksheet  
Production Bill of Materials  
Basic Capacity Planning  
Machine Centers  
Version Management  
Production Orders  
Finite Loading

# e-Jewelry Specialized Features & Reports

## Inventory Processing

- Maintain Dual unit of measure piece & weight.
- Bulk import images for items.
- Bar Coding & Scanning
- Multiple Vendors for items
- Customer Discount Schedules
- Bar Coding & Scanning
- Multi-Metal/Stone & Weight
- Tracking inventory transactions
- Real Time Inventory by Item
- Item tracking by Location.
- Physical/Transfer Journals
- Style items with serial tracking
- Maintain Item Variants.
- Stock Tracking functionality
- Track inventory by weight and piece
- Create stock from item card
- Dismantle manufactured stock
- Negative Inventory Control

## Metal Functionality

- Maintain daily market price per metal.
- Calculate price of item based on metal in regards with live market price.
- Costing based labor/gr & labor/piece and increment.

## Memo Functionality

- Full Memo ordering module.
- Return Processing (Full/Partial).
- Invoicing against memo shipments (Full/Partial)
- Fast bulk processing for Returns and Invoices.
- Full tracking of memo transactions.
- Memo invoicing from multiple memos
- Fast memo return with bar code scanning
- Quote to Order Conversion
- Vendor Memo functionality.
- Rich reporting for whole memo module.

## Toll Accounting Functionality

- Meal ledger for toll accounting.
- Ability to separate metal in sales and purchase i.e. Bill only for labor and maintain metal outstanding.
- Stock Low/Out Warnings per Item
- Credit Limit Warnings per Customer

## Marketing, Functions & Estimation

- Create Estimations for items.
- Use estimations in Sales Order.
- Create Item Catalogs for customers.
- Quotes with items Images (Multiple formats)
- Generate catalog from Quote

## Comprehensive Diamond Functionality

- Maintain Dual unit of measure pieces and weight with inter-conversion.
- Maintain diamond standard attributes.
- Ability to create diamonds/stone card from excel.
- Diamond Lot Split and Merge utility
- Integration with Rapaport pricing.
- Diamond search assistant.

## Manufacturing Functionality

- Maintain BOM/Routing/Work Centers and Machine centers.
- Maintain tools and personals for process
- Master Production Scheduling
- Material Requirement Planning
- Facilitates Make-to-Order and Make – to-Stock options.
- Generate Purchase orders from manufacturing requirement.

## Inventory & Costing

- Multiple Costing methods (Standard, Average, LIFO, FIFO, Specific)
- Cost by Markup or BOM line

## Purchasing Module

- Automate the entire purchasing process
- Suggest items to purchase report
- Create PO from sales orders lines
- Import Diamond details from excel
- Create purchase orders automatically

## Invoicing Features

- Keep detail record of invoices and receivables.
- Multiple Ship to with only one Bill
- Manual Discounts
- Auto Discount by Customer(s)
- Finance Charges Journal (Processing & Tracking)
- Invoice with Items Images

## Sales Functionality

- Automate entire sales process.
- Facility to create purchase order from Sales order
- Customer Appraisals
- Ability to handle returns
- Shipment Tracking & Labels (UPS, FedEx, DHL)
- Drop Shipments
- Credit Memo (Processing & Tracking)

## Sales Commission

- Comprehensive sales commission engine.
- Commission calculation based on commission rules

- Calculate commission on invoice amount
- Calculate commission paid invoices only
- Split commission for multi-sales people

## Mailing Functionality

- Facility to send SO, PO, Statement & Memo documents by email.
- Single click operation on documents.
- Facility to send documents in bulk.
- Ability to maintain unlimited emails with receiving options as to or cc.

## Label Printing

- Facility to print label from Shipment, receipt Item card etc. documents.
- Easy and in depth configuration of label.
- Integration with BarTender and EasyLabel.
- RFID Integration
- Flexible Label Formatting

## Jewelry Job Production

- Create Job Bag for manufacturing jewelry item.
- Facilitates Make-to-Order and Make – to-Stock options.
- Repair Jobs with custom item usage.
- Tracking of jobs per resource.
- Facility to create Jobs from Purchase Order.

## Security

- Security based on roles and permissions.
- Block cost for non-authorized users

## E-commerce Integration

- Ability to handle XML file transfer for importing bulk orders.
- Ability to connect various e-commerce platforms.
- Communicate e-commerce portal thru web services.

## Other Features

- Imaging throughout the System
- Multi-Currency Conversion
- Jet Reports/Jet Enterprise Integration
- Magento E-Commerce Integration
- Microsoft Dynamics CRM Integration
- RFID Integration
- Microsoft Dynamics Point of Sale Integration
- Ipad & Mobile Devices Integration
- Multi-Lingual Capabilities
- Document Management
- True Client/Server Environment
- EDI, E-Ship & Forecasting
- User Added Warnings per Customer

# e-Jewelry Specialized Features Detailed Definitions

## Inventory Processing

This granule all jewelry industry specific functionality to NAV. The prime requirement to maintain items in its dual unit. The transactions takes place in pieces and weight as well. e-Jewelry facilitates use of dual unit and inter convertibility.

1. Barcode and Scanning: Label can be printed from transactional documents like Sale Order, Sales Shipment, Purchase Order, Purchase Receipt, Item Card, and Serial No. Card.
2. You can scan your item directly into documents.
3. You can enter pieces or weight in transaction documents. The counter unit gets calculated.
4. e-Jewelry has integration with Easy Label and Bartender to print labels.
5. Item images can be imported in bulk.

## Metal Functionality

1. e-Jewelry provides full metal management. This covers various aspects of price management, costing etc.
2. Maintains day-to-day prices per metal viz. Gold, Silver, Platinum etc.
3. Calculates Cost and Price of items based on metal in regards with live market prices (as updated).
4. Ability to sell separate metal in sales. (When item shipped to customer and only labor is charged and metal is expected to be returned back. Toll accounting)
5. Ability to maintain metal outstanding only. Which can be paid by customer in the form of metal itself or currency.
6. Updates BOM prices of items, which includes item based on metal upon change in metal price.

## Memo Functionality

This granule allows you to send merchandize to customer on returnable basis. When material is sent on Memo, its inventory is distinguished from in house inventory. Customer either can sell the item or sent it back. When the material is sent back it's taken as return and updated the inventory. When customer sells the item on the same order you can invoice the item for the customer.

1. Ability to ship items on memo.
2. In Fast memo option, user is able to select customer and on scanning item, system creates memo document.
3. In Fast invoice option, user is able to select customer and item, system searches the item shipped for the customer and invoices it against the Memo Order.
4. In Fast return option, user is able to select customer and scans item. System post the receipt against the shipment.
5. Maintains history of memo transactions.
6. Reports
  - a. Memo statement. Details of memo transactions for customer
  - b. On memo by Customer. Detail listing of items on memo.
  - c. On memo by Item. Detail listing of items on memo.
  - d. Memo Performance. List of memos showing details of items invoiced or received against memo.

## Diamond Functionality

This functionality manages all diamond requirements. Maintains required attributes. Takes care of Rapaport integration.

1. Maintain dual unit's carat weight and pieces and their interrelation.
2. Maintain diamond items with all its attributes required by jewelry industry.
3. Update Rapaport prices to diamonds.
4. Ability to create diamonds from Rapaport List.
5. Ability to create diamonds based on excel list.
6. Facility to search diamonds based on its characteristics.
7. Facility to split diamond lot into desired lots.

## **Manufacturing Jobs**

1. e-Jewelry has simplified job modules.
2. Ability to track job progress per resource.
3. Can allocate components and post them as they are consumed.
4. Can process repair jobs.
5. Integration with sales order.
6. Stock jobs can directly be prepared from Item card.
7. Can track time required to finish each process and print time details.
8. Enhanced industry approved job card formats.

## **Inventory & Costing**

1. Maintain dual unit's weight and pieces and their interrelation.
2. Ability to separately post labor cost from sales order in case of metal transaction.
3. Allows interface to create items on a go with simple entry card.
4. Facility to import and create items from excel and use them directly into purchase order.

## **Purchasing Module**

1. Automating purchasing process.
2. Ability to import items from excel.
3. Suggest item requirement to be procured.
4. Requisition management.
5. Reorder inventory based on stock level.
6. Enhanced reporting.

## **Invoicing Features**

1. Convert quote into sales orders.
2. Ability to convert Memo into Invoice.
3. Facility to create (e-Jewelry) manufacturing job from sales order.
4. Facility to create repair jobs from sales order.
5. Facility to use Assembly BOM, in sales order with dual unit.
6. Provides integration with Estimations
7. Ability to related View/Post/Cancel jobs from sales order.
8. Facility to print tags from sales order.

## **Mailing Functionality**

1. Facility to send documents over email
2. Configure list of emails for customer who will receive mail. Can be mentioned as mail to or CC.
3. Optionally keep the document sent to customer/vendors.
4. Can choose from SMTP direct delivery or Outlook integration.
5. Customizable subject and body texts.
6. Can Send
  - a. Sales Order Confirmation,
  - b. Sale Invoice
  - c. Sales Credit Memo.
  - d. Customer Statement
  - e. Sales Quote
  - f. Purchase Order.
  - g. Memo Confirmation
  - h. Catalog
  - i. Estimate.

## Label Printing

This facility allows you to print labels (Tag) for your jewelry merchandize.

1. Facility to print labels from various documents, Sales order, Purchase Order, Purchase receipt, Item Card, Sr. Number Card.
2. Facility to maintain matrix of different label per Item, per customer or group of item, group of Customers.
3. No of labels printed based on quantity or quantity to ship.
4. Can print desired no of labels from item card.
5. For item special Tag price can be maintained which can be printed on label.
6. Integration with BarTender and EasyLabel.
7. Can use exclusive short descriptions for Tag apart from items descriptions.

## Jewelry Production

This facility allows you to create job cards for the sales order, which is displayed in the line. When job is created, you can print job envelop from sales line directly. When job gets executed in steps, its status is updated in sales line.

1. Creates job bag for manufacturing jewelry items.
2. Can be added required components and resources used while making the finished item.
3. Creates job bag for repair of items. Can be added resources used while repairing the item.
4. Facility to track jobs per resource and schedules of dates of completions.
5. Ability to maintain time required to complete item
6. Jobs can be created from sales order as make-to-order and Item card as make-to-stock.
7. Facility to allocate and consume.
8. Reports
  - a. Job Ticket/Job Envelop (Multiple Formats)
  - b. Availability and requirement of components required to manufacture the finished item.

## Marketing Functionality

As part of marketing, company needs to send catalogs to customers. Send estimations with various combinations of components for an items and create orders based on the estimates.

1. Estimations
  - a. Ability to create estimation for customer with customized components.
  - b. This estimates can be used in sales order and bill based estimated price.
  - c. Can be added drawing as estimate picture.
  - d. Reports
    - i. Estimation
    - ii. Estimation with Components
2. Catalog
  - a. Ability to send catalog of selected items to customer. This includes image of item. The fields to be shown are decided by user.
  - b. Bulk items can be selected in catalog.
  - c. Can show sales prices from sales price matrix for the customer.
  - d. Can create catalog with fixed desired metal price.
  - e. Can send catalog as pdf attachment by an email on fly.
  - f. Report
  - g. Catalog Report.

## Sales Functionality

1. Maintain dual unit's weight and pieces and their interrelation.
2. Maintains customer's appraisals for items.
3. Ability to recalculate metal items based on market price.
4. Ability to assign multiple sales person to an order.

## Sales Commission

1. Calculate commission (On Invoice amount)
2. Calculate commission (Paid invoices only)
3. Split commission for up to four people
4. Split commission based on different rates
5. Allow to recalculate commission rate on
6. Apply credit to invoices to reduce
7. Commission due amount
8. Mark commission paid invoices

## Security

1. Block cost for non-authorized users
2. Potentially restricts user to access the data what he/she is not authorized to.
3. Simplified user's permission setup.

## Toll Accounting Functionality

This facility allows you to bill labor only against the item you sell to customer. This facility maintains separate outstanding of amount and metal. There is a special metal receipt provided to receive payment against metal outstanding in kind of currency or metal or even alternate metal.

## E-Commerce Integration

1. Xml files transfer: this is based on xml files transfer. Portal and NAV communicates to shared folder where files are stored and read by both ends. The files ones got processed, gets moved to archive folder. Based on processing results success or failed the files are moved to different folders. Email notification sent on each failure to relevant people based on configuration.
2. Web Services: portal data can be published thru web services which NAV can read and process the information in NAV data. NAV is capable of publishing web service which portal can access and read information shared by NAV. The web services are protected with high security methods.
3. SQL database: in this method an intermediate SQL database is used for storage of shared data. Both portal and NAV access the database to update / read data. Job queue are used to process data from and update data to common database.
  - a. The data can be synchronized is:
  - b. Orders and Customers:
  - c. Shipments
  - d. Inventory update and new Items
  - e. Returns
  - f. Payment
  - g. Update Sales prices.
  - h. Any other data as per requirement

# Financial Management

<b>Daily Invoicing Report Detail</b>	Shows the total invoice or credit memo activity, or both. This report can be run for a particular day, or range of dates. The report shows one line for each invoice or credit memo. You can view the bill-to customer number, name, payment terms, salesperson code, amount, sales tax, amount including tax, and total of all invoices or credit memos. If you want both invoice and credit memo activity it will show invoice and credit memo activity on separate pages.
<b>Cash Receipts by Date</b>	Lists cash daily receipts
<b>Profit Report by Customer</b>	Shows customer-wise profit margin on items sold to customer.
<b>Profit Report by Item</b>	Shows item-wise profit margin on items sold.
<b>Day Book</b>	List of all financial transaction for given period.
<b>Detail Trial Balance</b>	Shows a detail trial balance for selected general ledger accounts. You can use the report at the close of an accounting period or fiscal year.
<b>Receivables-Payables</b>	Shows a summary of receivables for customers and payables for vendors.
<b>Trial Balance/Previous Year</b>	Shows a trial balance in comparison to the previous year's figures. You can choose to see a trial balance for selected dimensions. You can use the report at the close of an accounting period or fiscal year
<b>Trial Balance/Budget</b>	Shows a trial balance in comparison to a budget.
<b>Account Schedule</b>	Shows an account schedule that can be used to display the general ledger accounts in a different way than in the chart of accounts. For example, account schedules can be used for reports on key figures.
<b>Fiscal Year Balance</b>	Shows balance sheet movements for selected periods. The report shows the closing balance by the end of the previous fiscal year for the selected ledger accounts. It also shows the fiscal year until this date, the fiscal year by the end of the selected period, and the balance by the end of the selected period, excluding the closing entries. The report can be used at the close of an accounting period or fiscal year
<b>Balance Comparison – Prev. Year</b>	Shows an overview of the general ledger accounts with information about the current period, the balance at the end of the period, the balance in the same period of the previous year, and the balance of the previous year
<b>Bank Account Register</b>	Shows posted bank account entries sorted and divided among each register.

## Memo Features

<b>On Memo by Customer</b>	Customer-wise list of inventory on memo.
<b>On Memo by Item</b>	Item-wise list of inventory on memo.
<b>Outstanding Memo Order</b>	This gives customer-wise list of memos which are not shipped. This shows amount of remaining quantity to ship.
<b>Customer Memo Statement</b>	This another format for memo statement. This prints list of memo for the customer with due date and balance with the customer.
<b>Memo Not Shipped Status</b>	This lists all the memo orders which are not shipped.
<b>Memo Performance</b>	This gives list of memo shipped versus quantities invoiced against shipment. This shows performance of invoicing against shipment.
<b>Bank Account Register</b>	Shows posted bank account entries sorted and divided among each register.

# Estimation, Quotes & Catalog

<b>Catalog with Expected price</b>	This report prints catalog based on expected metal price. User need to enter metal price at runtime of the report. This report calculates selling price of each item.
<b>Item Catalog New</b>	This prints item catalog in matrix format. This prints three columns and three rows on each page. This show image of item, and the fields selected on catalog header.
<b>Item Catalog (Format 1)</b>	This prints item catalog in 4 x 2 matrix format. This includes image available inventory of item. This also prints barcode for the item.
<b>Item Catalog (Format 2)</b>	This is item list catalog format. This shows image, description, UPC code and tag price.
<b>Quote Item Catalog</b>	The sales quote document can also be used to print to catalog. This quote item catalog prints catalog from quote. This is 4 x 3 matrix document.
<b>Customer Estimation</b>	This is estimate for a particular item with customized components. This shows cost and price of each component item. This also includes customer confirmation slip to sign and return back as confirmation.
<b>Estimation Parts Breakdown</b>	This estimate prints details of components, metal, diamonds and resources separately and gives the total cost and price.
<b>Estimation Vendor Compare</b>	This gives comparison details of estimated items when it is bought from different vendors.

## Sales Module

<b>Customer - Detail Trial Balance</b>	Shows a detail trial balance with entries for selected customers for a selected period. The report can be used at the close of an accounting period, for example, or for an audit.
<b>Customer - Order Summary</b>	Shows the order detail (the quantity not yet shipped) for each customer in three periods of 30 days each, starting from a selected date. There are also columns with orders to be shipped before and after the three periods and a column with the total order detail for each customer. The report can be used to analyze a company's expected sales volume.
<b>Customer - Order Detail</b>	Shows a list of orders divided by customer. The order amounts are totaled for each customer and for the entire list. The report can be used, for example, to obtain an overview of sales over the short term or to analyze possible shipment problems.
<b>Customer - Summary Aging Simple</b>	Shows a list of the customers' balances due in LCY divided into five time periods: not overdue; 0-30 days overdue; 31-60 days overdue; 61-90 days overdue; and more than 90 days overdue. The report can be used to manage the issuance of reminders or to prepare liquidity analyses.
<b>Statement</b>	Replaced by 14052432: JW Customer Statement
<b>Customer - Balance to Date</b>	Shows a detail balance for selected customers.
<b>Customer - Trial Balance</b>	Shows a detail balance for selected customers. You can use the report to verify that the balance for a customer posting group is equal to the balance on the corresponding G/L account on a certain date
<b>Inventory - Sales Back Orders</b>	Shows a list with the order lines whose shipment date has been exceeded and by no of days been delayed
<b>Aged Accounts Receivable</b>	Gives detailed/summarized aging of customer outstanding

Get critical reports in a matter of seconds!

<b>Customer Sales Statistics</b>	Shows amounts for sales, profit, invoice discount, and payment discount in LCY, as well as profit percentage, for each customer. The costs and profits are given as both the original and adjusted. The original costs and profits are those that were calculated at the time of posting, and the adjusted costs and profits reflect changes to the original costs of the items in the sales. The cost adjustment amount shown in the report is the difference between the original cost and the adjusted cost. The figures are divided into three periods. You can select the length of the period, starting on a selected date. There are also columns for amounts before and after the three periods. The report can be used, for example, to analyze earnings from an individual customer and earnings trends.
<b>Customer/Item Statistics</b>	Shows the statistics about what items have been purchased by which customers.
<b>Customer/Item Stats by Sales Person</b>	Shows customer and item statistics listed by salesperson.
<b>Daily Invoicing Report</b>	Shows the total invoice or credit memo activity, or both. This report can be run for a particular day, or range of dates. The report shows one line for each invoice or credit memo. You can view the bill-to customer number, name, payment terms, salesperson code, amount, sales tax, amount including tax, and total of all invoices or credit memos. If you want both invoice and credit memo activity it will show invoice and credit memo activity on separate pages.
<b>Outstanding Sales Order Aging</b>	Shows customer orders aged by their target shipping date. Only orders that have not been shipped appear on the report.
<b>Outstanding Sales Order Status</b>	Shows detailed outstanding order information for each customer. This report includes shipping information, quantities ordered, and the amount that is back ordered
<b>Customer Statement</b>	Shows a list of customer statements. Use this report to print statements on generic forms or plain paper. You must enter a date filter to establish a statement date for open item statements or a statement period for balance forward statements.
<b>Customer Sales by Item Types</b>	This report shows customer wise sales per item type. This includes sales shipments and sales return with sales amount and piece price.
<b>Item Sales Profile</b>	This is sales profile is catalog of items. This is 5 x 4 matrix report. This prints item no, item image and item description.
<b>JW Customer Statement</b>	This customer statement prints all open entries for the customer. This shows total outstanding for the customer. This includes confirmation slip, which customer can mark which invoices being paid along with his payment.
<b>Customer - Order Summary</b>	This order summary prints customer-wise order amounts comparing monthly. This report prints data for three months. It shows sales order amounts booked for those three months with before and after the given period.
<b>Customer - Top 10 List</b>	This is top performing customer list with graphical representation of sales amounts. The number of customer to be included in report can be decided at the runtime of the report. This report comes with to graph options, Bar chart and Pie chart.
<b>Monthly Sales Summary Customer</b>	This report shows monthly sales amounts per customer for the selected year. This report exports to excel only.
<b>Monthly Sales Summary Item wise</b>	This report shows monthly sales amounts per Item for the selected year. This report exports to excel only.
<b>Commission Report</b>	This report gives commission amounts based on commission percent set on item card for all the invoiced sales.
<b>Coop Report</b>	This report gives Coop amounts based on Co-op percent set on customer card for all the invoiced sales.
<b>Sales Order Not Invoiced</b>	This report gives details of all the orders which shipped but pending for invoicing. This is customer-wise report.
<b>JW Sales Net Available</b>	This lists items with its image, wholesale price, tag price, total quantity on hand, quantity of memo order and quantity on sales order. This shows net quantity available for sale.

# Analysis Reports – Inventory

<b>Top Selling Items</b>	This report prints top selling items, highest first. This is matrix format report it prints items in 4 x 3 matrix. This shows item no., description, unit price, total quantity sold and quantity on hand.
<b>Top Items with Pictures</b>	This report prints top selling items, highest first. This is list format report. This shows item no., description, unit price, total quantity sold, quantity on hand, quantity on memo, quantity on job.
<b>Item Transaction Detail</b>	Shows detailed purchase, sales, and adjustment information about the items in your inventory. This report lists transactions by the item that they pertain to. If an item has variants, each variant's transactions are listed separately.
